

Plum Brook Decommissioning Program Office (QD)

The SMAD Plum Brook Decommissioning Program Office (PBDPO) is tasked with the safe decommissioning of the GRC Plum Brook Reactor Facility (PBRF) and the timely termination of the Nuclear Regulatory Commission (NRC) “possess but do not operate” license. Decommissioning includes the decontamination, demolition, and disposal of equipment, systems, soil, buildings, and structures that comprise PBRF to the requirements and satisfaction of the NRC. The Office is the central point of contact to the public, and with the NRC and the other state, federal, and local regulators. The PBRF Decommissioning Office provides the management, Safety and Environmental Engineering, and technical oversight for the PBRF Decommissioning Project. A Federal-Sector Team of experts and contractors supports the Office, and various other GRC offices provide both direct and indirect support.
